Airbus Technology Covers Top Event in Beijing

Largest Tetra network in Asia helps to protect the “Belt and Road Forum for International Cooperation”, hosting 1,200 delegates from around the world

Elancourt, 16 May 2017 – Airbus has provided reliable and secure radio communications technology to protect the “Belt and Road Forum for International Cooperation” in Beijing. 20 heads of state and 1,200 high-level participants from international organisations gathered the last two days to discuss economic development and cooperation in Asia. The Chinese capital’s mission-critical radio network “JustTop” for police and rescue services, based on Airbus Tetra (Terrestrial Trunked Radio) technology, contributed to the conference’s success.

“Airbus has always been a frontrunner in Professional Mobile Radio technology and our experience allows extremely reliable solutions”, says Selim Bouri, Head of Sales and Program Delivery Middle East and APAC of Secure Land Communications at Airbus. “In China, we have accomplished large-scale network projects. Such mission-critical communications technology based on the Tetra standard has huge potential in all Asia, whether in public safety or industries,” he adds.

In recent years, Airbus used repeatedly its technical competence to provide additional network infrastructure for large sport events or political summits. Tetra technology laid the foundation for secure communications, enabling the security forces to coordinate their work efficiently.

Being the largest Tetra network in the region Asia-Pacific and second largest of its kind worldwide, the Beijing JustTop Tetra network has around 110,000 subscribers of public safety organisations: police, emergency response officers, firefighters, ambulances and the municipal government. It comprises nine DXT-series switches and 550 base stations. It covers not only the city area, but also metro lines, highways, important buildings and several counties. Since its inception in the year 2003, it has supported many prestigious events, such as the Olympic Games in 2008 or the International Association of Athletics Federations World Championships in 2015.

Airbus

Airbus is a global leader in aeronautics, space and related services. In 2016, it generated revenues of €67 billion and employed a workforce of around 134,000. Airbus offers the most comprehensive range of passenger airliners from 100 to more than 600 seats. Airbus is also a European leader providing tanker, combat, transport and mission aircraft, as well as Europe’s number one space enterprise and the world’s second largest space business. In helicopters, Airbus provides the most efficient civil and military rotorcraft solutions worldwide.

News

Secure Land Communications (www.securelandcommunications.com)

Secure Land Communications (SLC), a business unit of Airbus, develops, installs and maintains professional and land mobile radio (PMR/LMR) networks based on Tetra, Tetrapol and P25 technologies and offers a wide range of radio solutions and devices for customers worldwide. The portfolio also encompasses mission-critical broadband solutions based on 3GPP standards and emergency response centres (911/112). SLC is a leader in PMR, with more than 280 radio networks in over 74 countries, and the US leader for 911 response centres with the VESTA 911 call handling solution serving more than 60% of the market. SLC employs nearly 1,700 people in 20 countries.
